Accuracy = WAR (% of the 7,442 CREMA-D clips classified correctly). Changes are in percentage points: + = better, − = worse than the original descriptions on the same model. Numbers in brackets are not statistically significant (McNemar test, $p \geq 0.05$). Models 1–5: the five DFER-CLIP models trained on DFEW (one per fold). Each wording is used for all emotions; “anger” is only an example.
